Agent A

Sender-local fact

selects REQ

SELF+REQ proposal

SELF: sender path
REQ: peer continuation

Short DSL

SELF A: obtain oak_planks > deliver to B
REQ B: craft crafting_table > deposit

REQ

Peer-local fact

Task-prescribed mode

Mode B-crafts planks from A

Mode A-crafts B receives table

Agent B

delivered REQ

Shared task graph + primitives

requested suffix

processing mode

FORWARD: REQUEST

Receiver realization

learned or deterministic

$x_j, r^{\text{del}}, K_j \rightarrow u_j$

Path resolver

Request match
Handoff agrees
Acyclic merge

$C^{\rightarrow}_{ij}$

Forward

FEEDBACK: RESPONSE

Response policy

deterministic

ACCEPT • REJECT
COUNTER(α)

REJECT
No commitment

ACCEPT / COUNTER

Requester revision

revise proposal
then resolve

$C^{\leftarrow}_{ij}$

Feedback

Feedback example

Response	Crafter	Handoff
ACCEPT	B	4 planks
COUNTER (α)	A	crafting table

Destination: order_chest

Resolved commitment $C^{\rightarrow}$ or $C^{\leftarrow}$

A owes delivery
B owes completion after verified receipt

CHECKED EXECUTION

1 **Check**

typed fields

2 **Materialize + compile**

dispatch plan → skills

3 **Execute**

world action + handoff

4 **Verify**

receipt + completion
