

Fixed request × private capability

The peer-local workcell determines which side of crafting receives the handoff.

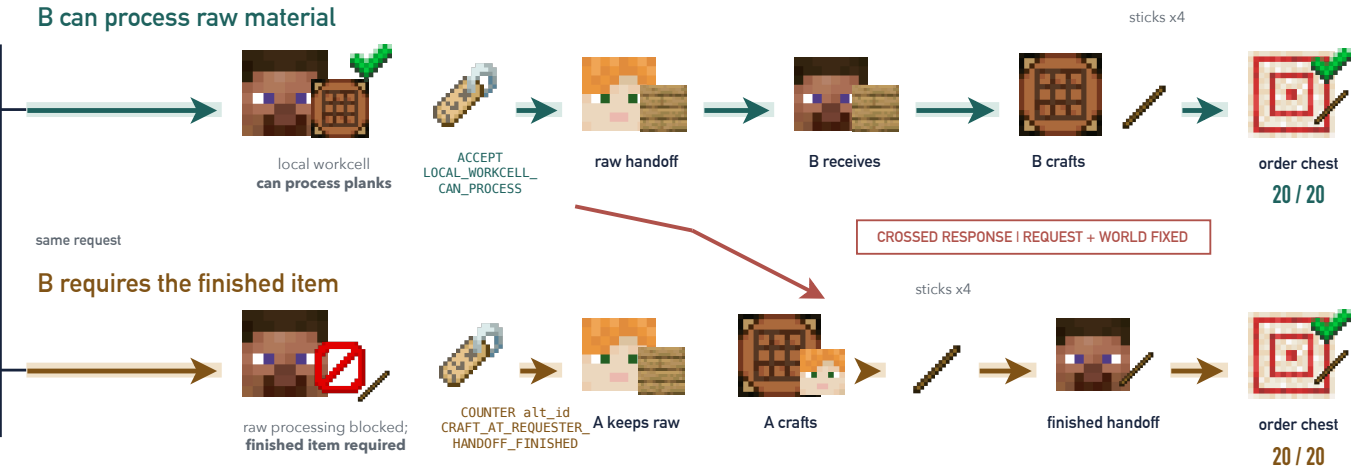

Fixed requester record

```
SELF resource.obtain(q=2,item=oak_planks) > resource.deliver(q=2,item=oak_planks,to=agent_b)  
REQ agent_b craft.item(q=4,input=oak_planks,item=stick) > resource.deliver(q=4,item=stick,dst=order_chest)
```

same request / same prompt hash

a7f300f3...

peer workcell mode changes actor assignment and the handoff side of crafting
